ABS Corporation is a licensed cGMP custom contract manufacturer that has been in business for over 50 years serving a wide range of customers in both manufacturing and packaging drugs, medical devices, dietary supplements, cosmetics, foods, feeds, and an assortment of other products. The products that we manufacture can be found on tables and on store shelves across the United States and in some foreign territories. ABS Corporation is committed to the quality of their products and in delivering quality and value to their customers.

ABS Corporation proudly manufactures and packages Green Pasture products at our campus in Omaha, Nebraska. The products we manufacture and package for them include their fermented cod liver oil products and blends, butter oils and blends, and their coconut oils and blends. We test the raw materials received from Green Pasture to make sure they meet strict specifications for food safety and quality and then we test the finished product after manufacture for microbial contamination to ensure food safety for their consumers. All batches released from ABS Corporation come with a certificate of analysis that records the results from the finished product tests and are signed by the Quality department at ABS Corporation.

ABS Corporation is registered with the FDA as a food and drug manufacturer and is also certified to meet the requirements of the USDA Organic program as a handler and packager. ABS Corporation is also pursuing other third-party certifications that align with our business commitment to provide safe quality foods for our customers. Overall, our commitment to providing value and quality for our customers and implementing continuous improvement programs help us to manufacture quality products for our customers and for consumers everywhere.
